7. DETAILED VERSION HISTORY ................................. 20
1. Outcome

By using this work instruction an authorised officer will be able to inspect bulk or bagged prescribed goods being loaded into container system units for government certification purposes.

2. Scope

This Work Instruction applies to the sampling and inspection by an Authorised Officer of any:

(i) prescribed grain being exported from Australia; and
(ii) other prescribed goods, being seeds, stockfeed and woodchips.

An Authorised Officer is a person appointed under section 20 of the Export Control Act 1982 (the Act) approved to undertake inspection and certification activities in accordance with the Act (and subordinate legislation).

For the overarching principles that apply to the inspection of bulk and bagged prescribed goods, please see the following Standard Operating Procedure:

- Sampling and inspection of prescribed goods for export

3. Activities

Relevant goods being loaded into container system units (bulk and bagged)

Preparation for Inspection

OFFICE:

☐ The Authorised Officer is aware of the importing country requirements by sighting:

   (a) an import permit;
   (b) other written documentation from the importing country authority; or
   (c) the PHYTO database

☐ All appropriate paperwork (ie. NOI, Import Permit, Phytosanitary Certificate, Loading Permit, Export Inspection Record (EIR)) is supplied by the exporter/exporter’s agent and/or is available to the Authorised Officer.

☐ Inspection equipment (Attachment 1) is available and fit for purpose.
ON-SITE:

☐ The authorised officer considers the registered establishment facilities to be fit for purpose (see the Establishment Register database and Work Instruction – Registration of establishments for the preparation and presentation of prescribed goods).

☐ The authorised officer inspects the CSU and considers it fit for purpose (e.g. has completed empty container inspection record, inspection sticker, seal) OR an inspected and passed CSU is available.

☐ The authorised officer inspects the flow path and considers it fit for purpose (e.g. for bulk loading the auger, tuberator etc are clean and free from pests and contaminants).

☐ The authorised officer records any findings (e.g. contaminants) and treatment required on the Hygiene Inspection, Cleaning & Waste Disposal Record (Attachment 2) and the Export Inspection Record (Attachment 3).

☐ The authorised officer, through communication with the exporter /packing facilitator determines the inspection lots (cell[cell number] and location.

Drawing a sample (bulk relevant goods)

☐ At establishments where container system units are being filled directly from holding bins, the relevant goods may be:

(a) sampled from the stream as it enters the units; or

(b) sampled elsewhere in the stream path so long as, prior to the commencement of loading on the day concerned, the whole pathway forward of the sampling point to the point of loading was inspected and found to be free of a risk of contaminating the goods.

☐ The authorised officer draws sub-samples at the approved sampling rate.

The minimum sampling rate shall be 2.25 litres of product per 33.33 tonne with the sample drawn randomly throughout the 33.33 tonnes.

☐ The Authorised Officer draws sub-samples from the goods using suitable equipment (Attachment 1).
Sieving a sample (bulk relevant goods)

☐ The Authorised Officer sieves all sub-samples using suitable equipment (Attachment 1).

☐ The Authorised officer sieves all sub-samples using the following method under Schedule 6(7) of Plant Orders:

(a) The sieve must be shaken a sufficient number of times to allow all insects in the sample to pass through the screen into the pan beneath.

(b) The product remaining above the screen must be examined for insect stages or contaminants that are too large to pass through the mesh.

(c) After examination, the sieved product must be returned to the stream and the contents of the pan examined for live insects.

(d) If the use of automatic samplers and mechanical shakers or other mechanical sieving devices has been approved, these must be operated according to the approval by the Secretary.

☐ The Authorised officer inspects the sub-samples for the purpose of detecting pests and contaminants.

☐ The presence of live pests in or on a container system unit, bags or the grain must lead to rejection.

Inspection of relevant goods in container system units filled in the absence of an approved inspector

☐ Whenever possible, inspection of relevant goods in container system units must take place at the time of the filling of the units but, if this would involve the carrying out of an inspection at a remote location, the goods may be inspected when the units arrive at a port or metropolitan area.

☐ An authorised officer must:

(a) check that the container system unit has passed inspection by noting the presence of an ‘Inspected’ sticker and confirming that the number of the unit is on the checklist provided by the office responsible for the inspection; and

(b) check that any bulkhead fitted into the container system unit is clean, sound and free from infestation, and that there are no insects around the doors or bulkhead; and

(c) in the case of general purpose container system units, ensure that there is headroom of at least 900 mm over all of the bulk, or sufficient headroom to enable the withdrawal of sub-samples by vacuum probe or other appropriate equipment; and
(d) sub-sample or have sub-samples drawn with a probe in a minimum of five places, specifically one in each corner and one in the centre of the container system unit, and the probe must be inserted to the bottom of the unit so that the sub-sample is a representation of the full depth of goods at that point.

**Drawing a sample (bagged relevant goods)**

- The Authorised officer determines the number of bags in the inspection lot.
- The Authorised Officer randomly selects the bags to be sampled and inspected using the approved sampling rate.

**The minimum sampling rate shall be:**

**(a) 1 to 5 bags** – the outside of every bag shall be inspected and 1 sub-sample taken per bag;

**(b) 6 to 30 bags** – at least every third bag and not less than 5 bags shall have;
   - i) the outside surface inspected; and
   - ii) 1 sub-sample drawn from each.

**(c) 31 bags or more** – at least every fifth bag and not less than 10 bags shall have;
   - i) the outside surface inspected; and
   - ii) 1 sub-sample drawn from each.

- The Authorised officer draws sub-samples from the goods using suitable equipment (Attachment 1).
- The Authorised Officer draws sub-samples from the top, middle and bottom of the bags.

**Sieving a sample (bagged relevant goods)**

- The Authorised Officer sieves all sub-samples using suitable equipment (Attachment 1).
- The Authorised officer sieves all sub-samples using the appropriate method under Schedule 6(7) of the Plant Orders (see page 5).
- The Authorised Officer inspects the sub-samples for the purpose of detecting pests and contaminants.
The presence of live pests in or on a container system unit, bags or the grain must lead to rejection.

**Rejection (bulk relevant goods)**

- The authorised officer rejects relevant goods if live pests are detected in or on a container or grain.
- The authorised officer applies a nil tolerance for live and dead rodents to all relevant goods.
- The authorised officer applies the following tolerances for contaminants detected in relevant goods under Schedule 6(2.3) of the Plant Orders:

**Pests and contaminants**

<table>
<thead>
<tr>
<th>Column 1 Contaminant</th>
<th>Column 2 Tolerance level</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) <em>Crotalaria</em> spp. — seeds (rattiepods) (except <em>C. goreensis</em> which is unrestricted)</td>
<td>nil in sorghum for all destinations</td>
</tr>
<tr>
<td>(b) <em>Datura</em> spp. — seeds (thornapples)</td>
<td>not more than 10 seeds per 2.25 L in sorghum for all destinations</td>
</tr>
<tr>
<td>(c) <em>Claviceps purpurea</em> — ergots</td>
<td>not more than 50 pieces per 5 L of grain unrestricted in wheat for USSR and Japan and not more than 3 pieces per 2.25 L in prescribed grain for other destinations</td>
</tr>
<tr>
<td>(i) of ryegrass</td>
<td></td>
</tr>
<tr>
<td>(ii) of the cereal or seed</td>
<td></td>
</tr>
<tr>
<td>(d) Rodents and rodent droppings</td>
<td>nil in relevant goods in each 400 t lot of relevant goods not more than:</td>
</tr>
<tr>
<td>(i) carcases</td>
<td>(a) 7 droppings in any 2.25 L sample;</td>
</tr>
<tr>
<td>(ii) droppings</td>
<td>(b) 4 droppings from any 2 consecutive 2.25 L samples; and</td>
</tr>
<tr>
<td></td>
<td>(c) an average of 2 droppings from all the 2.25 L samples drawn</td>
</tr>
</tbody>
</table>

The authorised officer reports to the person responsible for the relevant goods any other contaminating material detected during inspection.
☐ The authorised officer notifies the person responsible for the relevant goods of any rejected goods that require treatment on an approved form (Attachment 5).

**Rejection (bagged relevant goods)**

☐ The authorised officer applies the tolerances and rejection levels for pest infestation and contaminants under Schedule 6(20) of the Plant Orders (see Attachment 4).

☐ The authorised officer reports to the person responsible for the relevant goods any other contaminating material (such as rust) detected during inspection.

☐ The authorised officer notifies the person responsible for the relevant goods of any rejected goods that require treatment on an approved form (Attachment 5).

**Treatment**

☐ The owner or owner’s agent is responsible for nominating the method of treatment and applying the treatment to the rejected goods.

☐ The person responsible for the rejected relevant goods must record the treatment applied to the rejected goods on an approved form (Attachment 5).

☐ Relevant goods rejected for insect infestation are treated by spraying OR fumigation under Schedule 6(28.1 and 29.1) of the Plant Orders as follows: •

**Insecticides**

☐ If an insecticide is used, it must be:
   (a) registered for the particular use; and
   (b) used in accordance with its registered label; and
   (c) acceptable to the importing country.

☐ Rejected goods treated with an insecticide must not be re-presented for inspection until after the exposure, airing periods and safety precautions specified on the registered label have been observed.
Fumigants, including controlled atmospheres

☐ If a fumigant is used, it must be:
   (a) registered for the particular use; and
   (b) used in accordance with its registered label; and
   (c) acceptable to the importing country.

☐ Relevant goods treated with fumigants must not be re-presented for inspection until after exposure, airing periods and safety precautions specified on the registered label have been observed.

☐ Relevant goods rejected for contaminants are treated under Schedule 6(30) of the Plant Orders as follows:

Contaminants

☐ For contaminants for which a nil tolerance applies, cleaning of the relevant goods must be carried out to remove the contaminating material, if the goods are to be re-presented for export.

☐ For contaminants for which a numerical tolerance applies, cleaning or blending to below the permitted tolerance may be carried out.

☐ If contamination has occurred on the outsides of bags or other packages, such contamination may be removed by brushing or other mechanical means.

☐ Rejected goods treated in container system units were treated under Schedule 6(31) of the Plant Orders before re-inspection by the Authorised Officer.

Re-inspection

☐ Rejected relevant goods are treated under Schedule 6 (Part 7 – as above) of the Plant Orders prior to presentation to the authorised officer for re-inspection.

☐ The treatment of rejected relevant goods is recorded on an approved form (Attachment 5).

☐ The authorised officer samples, inspects and rejects if necessary any re-presented relevant goods under Schedule 6 of the Plant Orders.

4. Essential Equipment

See attachment 1 for essential equipment list.
5. Definitions

In this WI, the following words are used as defined:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Authorised Officer</strong></td>
<td>means a person appointed under section 20 of the <em>Export Control Act 1982</em> to be an authorised officer.</td>
</tr>
<tr>
<td><strong>Consignments</strong></td>
<td>means a quantity of prescribed goods assembled at the same place and intended for export at the same time to a particular importing country, and nominated on an export permit(s) and/or Phytosanitary Certificate E16. A consignment may consist of one or more <em>inspection lots.</em></td>
</tr>
<tr>
<td><strong>Container system unit (CSU)</strong></td>
<td>means a container (including a lift van but not including a vehicle) designed for use as a unit of cargo handling equipment in the transport of prescribed goods by aircraft or ship.</td>
</tr>
<tr>
<td><strong>Contaminants</strong></td>
<td>means foreign matter.</td>
</tr>
<tr>
<td><strong>EC(PPP)Os</strong></td>
<td>means the <em>Export Control (Plants and Plant Products) Orders 2005</em></td>
</tr>
<tr>
<td><strong>Exporter</strong></td>
<td>The person responsible for ensuring that, until the goods are exported, they comply with any condition or restriction:</td>
</tr>
<tr>
<td></td>
<td>a) that is specified in an Export Control Order; and</td>
</tr>
<tr>
<td></td>
<td>b) that must be satisfied before the goods are exported.</td>
</tr>
<tr>
<td><strong>Fit for purpose</strong></td>
<td>means facilities and operations on a ship (including containers) are suitable for the sampling and inspection of prescribed goods for export and will not compromise the integrity of export certification.</td>
</tr>
<tr>
<td><strong>Foreign matter</strong></td>
<td>means any substance, whether organic or inorganic, that is included in, on or with prescribed goods, and includes soil, leaves or stems.</td>
</tr>
<tr>
<td><strong>Fumigation</strong></td>
<td>means treatment with poisonous gas, not including the use of contact insecticides propelled by carbon dioxide, smoke generators, fogging or spraying.</td>
</tr>
<tr>
<td><strong>Government certificate</strong></td>
<td>A certificate about prescribed goods the issue of which is authorised by an Export Control Order, being a certificate:</td>
</tr>
<tr>
<td></td>
<td>(i) as to matters about which a country requires certification before the goods may be imported into that country from Australia;</td>
</tr>
<tr>
<td></td>
<td>(ii) as to requirements of the Act that must be satisfied</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>before the goods may be exported from Australia; (iii) as to matters concerning goods of the kind that are to be exported</td>
<td></td>
</tr>
<tr>
<td>Grain</td>
<td>means whole seeds of wheat, oats, barley, sorghum, dried field peas, canola, vetch, soybeans and whole and split seeds of chickpeas, faba beans, lentils and lupins as prescribed by the Export Control Act 1982 (Export Control (Plants and Plant Products) Orders 2005) and mung beans as prescribed under the Export Control (mung bean) Order 1991.</td>
</tr>
<tr>
<td>Inspection Lot or (lot)</td>
<td>means an amount of bagged/bulk product presented for inspection.</td>
</tr>
<tr>
<td>Live infestation</td>
<td>means insects, mites, snails and rodents (either alive or dying (moribund)) and includes all stages of a pest lifecycle (eg. larvae, pupae etc.).</td>
</tr>
<tr>
<td>Pest</td>
<td>means a live or viable species, strain or biotype of plant or animal life, or a pathogenic agent, that is injurious or potentially injurious to plant or plant products.</td>
</tr>
<tr>
<td>Phytosanitary Certificate</td>
<td>means a certificate issued by one government, (ie. the Australian government), at the request of the government of an importing country, or in accordance with Article V of the International Plant Protection Convention, testifying to the plant health status (freedom from pests, diseases and weed seeds) of the certified product.</td>
</tr>
<tr>
<td>Plants</td>
<td>means members, alive or dead, of the plant kingdom and includes seeds.</td>
</tr>
<tr>
<td>Plant products</td>
<td>means material of plant or grain origin and includes seeds.</td>
</tr>
<tr>
<td>Prescribed goods</td>
<td>means goods, or goods included in a class of goods, that are declared by the regulations to be prescribed goods for the purpose of the Export Control Act 1982, Section 3 and the Export Control (Plants and Plant Products) Orders 2005, Part 1, Section 3.</td>
</tr>
<tr>
<td>Prescribed goods for consumption</td>
<td>means mung beans or any other prescribed goods that may be consumed by humans or livestock either with or without further processing</td>
</tr>
<tr>
<td>Prescribed grain</td>
<td>means seed or grain of any of the following kinds: barley, canola, chick peas, dried field peas, faba beans, lentils, lupins, oats, sorghum, soybeans, split vetch, whole vetch, wheat.</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>---------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Regulated article</strong></td>
<td>means any plant, plant product, storage place, packaging</td>
</tr>
<tr>
<td><strong>Relevant goods</strong></td>
<td>means prescribed grains and other prescribed goods being seeds, stockfeed and woodchips for which a phytosanitary certificate is required.</td>
</tr>
<tr>
<td><strong>Sample</strong></td>
<td>means a quantity of relevant goods that is representative of the entire consignment.</td>
</tr>
<tr>
<td><strong>Sieving or sieved product</strong></td>
<td>means the action of shaking a sieve sufficient times to allow all insects and contaminants to pass through the screen into the pan beneath.</td>
</tr>
<tr>
<td><strong>Sub-sample</strong></td>
<td>means a quantity of relevant goods that is drawn from a consignment of goods in a manner that ensures that the total quantity drawn is:</td>
</tr>
<tr>
<td></td>
<td>(a) in the same proportion to the total quantity of the consignment as 2.25L is to 33.33 tonnes; or</td>
</tr>
<tr>
<td></td>
<td>(b) sufficient to enable an inspection to be made.</td>
</tr>
<tr>
<td><strong>Treatment</strong></td>
<td>means any dismantling, repairing, cleaning or deodorising; or the application of any substance; or fumigation that is necessary for the eradication of pests</td>
</tr>
</tbody>
</table>

   - Standard Operating Procedure – Sampling and inspection of prescribed goods for export.
Attachment 1: Equipment list for inspection of prescribed goods (grain and plant products)

Authorised officers are to have access to the following equipment at all times when undertaking inspections of prescribed goods:

- 0.25 Litre dipper
- White Inspection Tray (for checking contaminants)
- Magnifying glass (minimum of x10 magnification)
- Knife (pocket)
- Trier(s) (suitable for sub-sampling grain and prescribed plant products)
- Sieve with screen size between 1.7mm to 2.0mm with a white catching tray; or
- Sieve with screens appropriate for the product being sampled (e.g. 5 mm for peas, faba beans etc.)
- Plastic buckets
- Insect vials
- Small paint brush
- Tweezers
- Scraper (metal or plastic for cleaning sieves)
- Dust masks
- High visibility safety vest
- Safety helmet
- Weed seed identification booklet
- Insect identification booklet

Attachment 4: Rejection procedures for pest infestation and contaminants

Authorised officers are to apply the following rejection procedures for pest infestation and contaminants when inspecting samples:

Rejection procedures:

☐ In the case of pest infestation:
   (a) A nil tolerance must be applied for pests in bagged relevant goods irrespective of whether the pests are found on the outside of the bags or sieved from the samples; and
   (b) If bagged consignments are inspected in trucks or as palletised units and live pests are found only on the structure of the vehicles or pallets, the relevant goods on the truck or pallet must be rejected; and
   (c) If large bagged stacks are inspected in store and a light local infestation is discovered, loading from another part of the stack remote from the site of infestation may be permitted; and
   (d) All bags or pallets in physical contact with the infested bags or pallets, or all goods in the stack originating from the same storage unit or the same bagging plant, must be rejected; and
   (e) Brushing of the outside of bags alone to remove insects is not acceptable for the purposes of these Orders.

☐ In the case of contaminants, the tolerances in subclause 2.3 apply only to relevant goods as specified in column 2 of that subclause.

☐ If, upon sieving a sample, a tolerance in subclause 2.3 is exceeded and the lot size is more than 33.33 t, further sampling must be carried out by an approved inspector to determine the distribution of the contamination throughout the stack.

☐ An approved inspector must then decide how many 33 tonne lots to reject.

☐ Bags must be free from extraneous matter that could contaminate or otherwise affect the condition of the relevant goods.
Attachment 5: Record of Rejection and Treatment of Goods
Attachment 7: Flow chart - Bagged goods in containers

Are the importing country requirements, notice of intent to export and loading permit available and complete?

YES → All relevant paperwork MUST be completed prior to inspection.

NO → Is the inspection equipment available and fit for purpose?

YES → Is the registered establishment fit for purpose?

YES → Has the container(s) and flow path passed inspection?

YES → Has a random sample of bags been selected as per the WI?

YES → Has the surface of the random selected bags been inspected?

YES → Weren't any levels of contamination material detected beyond the tolerances permitted?

YES → Have sub-samples of the bags been taken and inspected?

YES → Has the form EX072-03/04 been completed?

YES → Have the rejected goods been treated as per the WI and re-presented by the exporter?

YES → Export Inspection Record is completed and appropriate certification finalised (see WI – treating quarantine certificates, other than veterinary certificates, for grain and plant products).

NO → No sub-samples.

NO → Sub-samples MUST be injected prior to certification and export.

NO → This form MUST be completed before treatment and reinspection.

NO → Rejected goods MUST be treated as per the WI before reinspection.

NO → The registered establishment MUST be fit for purpose.

NO → Both MUST have passed inspection before grains can be exported.

NO → A random sample MUST be selected before inspection.

NO → NO
